

Water Supply Infrastructure Relevant to International Standards will be Arranged in Khashuri

17 November 2018

The company management together with Giorgi Khojevanishvili , -Governor in Shida Kartli, Simon Nozadze, - a Majoritarian MP of Khashuri and Giorgi Guraspashvili, - the Mayor of the town introduced the planned projects to the population. Water supply and sewer systems are outdated at this time, 90% of drinking water is amortized. Water is supplied with an average 6-hour schedule. At the meeting, the population was provided with the information about the capacity of the works which are planned by the company in the direction of arranging of modern infrastructure of water supply and constructing of cleaning up buildings. Rehabilitation works will start at the end of 2019. Project service works are being on this time. Around 28 000 people will be supplied with the centralized drinking water in the result of completing the project. The well-connected water tank web will serve the town. The cleaning up construction will implement a complete biological circle of cleaning up of running water after its entering into service which will significantly reduce the risks of environment pollution in the region. The meeting was held in discussion mode. Governor and the company management fully answered the population's questions.
