

Kareli Hospital, where the "Fever Center" operated, returned to normal working mode

05 June 2020

Kareli Central Hospital, which was fully declared in the conditions of the new Coronavirus pandemic on April 19, as the fever zone, returned to normal working mode. Shida Kartli State Representative Giorgi Khojevanishvili got acquainted with the situation in the clinic together with the Mayor of Kareli Municipality Zaza Guliashvili.

As of today, the epidemiological situation in the region is stable and under control. Accordingly, the clinic, which will be fully operational from April 19 as it was a fever zone, returning to the standard medical mode and services, however, if necessary, if there is an appropriate recommendation from epidemiologists, there is an isolated boxed department that provides management of suspicious patients on COVID 19. I would like to thank once again the medical staff, the people who had to work in the highest risk conditions and absolutely selflessly and professionally coped with their duties, "- said Shida Kartli State Representative.

From April 19 to June 1, Kareli Central Hospital of "Gormedi" network received 260 patients at the Fever Zone Hospital. According to the director general of the clinic, Vasil Cheishvili, 335 samples were sent to Lugar's laboratory, including 75 of the medical staff, and 64 rapid tests were performed and none of the cases were confirmed.
